# SIX STEPS TO FIRE!

- 1 Measure the interior dimension of your fire pit.
- 2 Choose the corresponding Plate or Pan size. (Pans include a 2" welded sidewall).
- 3 Select Burner based on appropriate size and fuel type. (Natural Gas or Liquid Propane).
- 4 Choose the Ignition System: match lit or a fully automatic ignition system.
- 5 Add Optional Electronic Accessories: remote control options, dial timers, and emergency stop buttons.
- 6 Complete the fire pit with Media: steel or ceramic logs, lava rock, or fire glass.

## PLEASE REMEMBER

- Plate should be sized slightly smaller than the measurement of the opening. This allows easier insertion and, if needed, removal for service.
- For outdoor use only. Installation and service must be performed by a qualified installer, service agency, or gas supplier. Installation and use must follow all local codes.
- Manufacturer recommends 3" of clearance from all interior sides of enclosure to nearest jet to avoid damage to enclosure.
- Modification of product will void any certification and warranty. (See page 69 for warranty information.)
- Follow all installation instructions and local codes. A copy of the Owner's Guide and Instruction Manual can be found on our website.

### TECH TIP

*Paver Kits are becoming more popular and Warming Trends offers kits - including burner, plate, flex line and key valve kits - specifically designed to work with a variety of paver company block features. See page 57 for our Universal Paver Kit selection.*

*Warming Trends burners come standard as Match Lit Systems but fully automatic ignition systems are available and are recommended for 300K BTU systems and larger. Ignition systems can be found on page 61.*
